

Ist das Schließsystem für Rack-Türen geeignet?

Profile half cylinders with spring return are available for the use of Kentix DoorLock in server cabinets.

This half cylinder has a compact design and can be used for almost all server racks on the market with a pre-equipped half cylinder.

By using several DoorLock AccessManagers, small installations from one rack door up to more than 1,500 doors can be combined into one closed system and managed from a central location.

Further information can be found on the [product page](#).
