

Wie wird die Fernöffnung ausgeführt und wie sicher ist sie?

Remote opening is possible by the KENTIX360 Cloud Service and the Kentix Smartphone APP or via an VPN tunnel from your device to the master AccessManager.

To remotely open a door with the App, the [Kentix360 Cloud](#) and the [Kentix App](#) need to be set up. You can then remote open the related DoorLocks. Doors can be opened via the web interface using the dashboard and DoorLock controls. This requires a connection between the device used and the Master AccessManager.

This can be a direct LAN connection or a VPN connection.

The cylinder is only released for a short time (15 seconds) during which the door can be opened.
