

Netzwerkintegration des SmartXcan

The Kentix SmartXcan comes standard with DHCP enabled, which allows the device to be automatically integrated into a network. If no DHCP server is active in the network, the SmartXcan can also be accessed via the fallback IP address **192.168.100.223**.

If it is necessary to configure the SmartXcan via the fallback IP address, we recommend deactivating the DHCP option and changing the network configuration to manual.
