

Ist die Strahlung des SmartXcan gesundheitsschädlich?

The Kentix SmartXcan uses a laser distance sensor to determine the correct distance of the head to the lens. The radiation emitted by this is harmless to humans. The laser is compliant with the IEC 60825-1:2014-3 standard and rated Class 1. This means that even a longer irradiation time does not cause any harmful effects to the user's health.
