

# SmartPDU

Intelligent, robust and calibrated: That was the formula for the development of our SmartPDU series. Together with long-standing data centre customers, we have developed a PDU that meets the essential requirements of robust and fail-safe power distribution.

We have thus fully concentrated on using the most proven components from the industry of power distribution. The result is an ultra-robust PDU that meets all requirements for power measurement and monitoring and can be managed via state-of-the-art interfaces (SNMPv2/3, REST API).
