

SmartPDU

A stable power supply is the most important basis of your IT and corporate structure. The Kentix PowerManager offers the easiest solution to monitor them seamlessly and integrate them into your network. The advantage is on the one hand the choice between radio and cable-based meters and on the other hand the simple IP network integration. The central unit, the Kentix PowerManager, offers full SNMP V2/V3 support, easy setup and a web-based user interface with all important data. The combination of Kentix PowerManager as a central unit with the ZigBee radio-based SmartMeters offers enormous integration and cost advantages over wired systems. Power and fuse failures can be reliably reported using radio technology.
