

Passt Kentix-DoorLock in meinen Server-Schrank / Rack

Kentix DoorLock is generally compatible with the following manufacturers:

- Rittal
- EMKA
- Knürr

The following prerequisites must be fulfilled:

Rittal:

The cabinet must be equipped with a TS8 locking system.

A comfort handle of type 8611.070 / 8611.360 / 8611.340 must also be or will be fitted to the cabinet.

You can also check existing cabinets

whether a profile half cylinder of the following type is installed in the cabinet: 9785.040 / 9785.042

EMKA:

The cabinet must be equipped with a swivel handle with variable locking insert (program 1325).

In addition, the following swivel handle must be available / installed on the cabinet: 1325-U1-01 (swivel handle with hook without cap)

You can also check existing cabinets

whether a profile half cylinder of the following type is installed in the cabinet: 3XB-120 / art. no. 1089-U1 / U2

Knürr:

The cabinet must be equipped with or prepared for a "door locking set" or "complete locking set" for Miracel cabinets (MIR20460 / MIR00069).

In the variants listed above, new cabinets can be equipped with Kentix DoorLock or the existing profile cylinders can simply be replaced.

For this purpose, [profile half cylinders](#) without spring return can be installed.

The length must be measured individually or taken from the data sheet belonging to the cabinet.
