Easy View is a KentixOne function that allows you to record monitoring data quickly and easily and keep an eye on important information.

The Easy View contains a system status overview that displays the number of all alarms, warnings and acknowledgeable alarms. In addition, the last five alarms are listed separately with a high level of detail.

The last 10 entries in the event and access log are listed separately in Easy View.

In addition, key figures from the SmartAccess, SmartMonitoring and SmartPDU areas can be defined and displayed. These provide a quick overview of the respective areas and can be compared with the previous month's values.
